BASIC T1 BASIC T1L

QUARTZ SYNTHESIZER STEREO TUNER

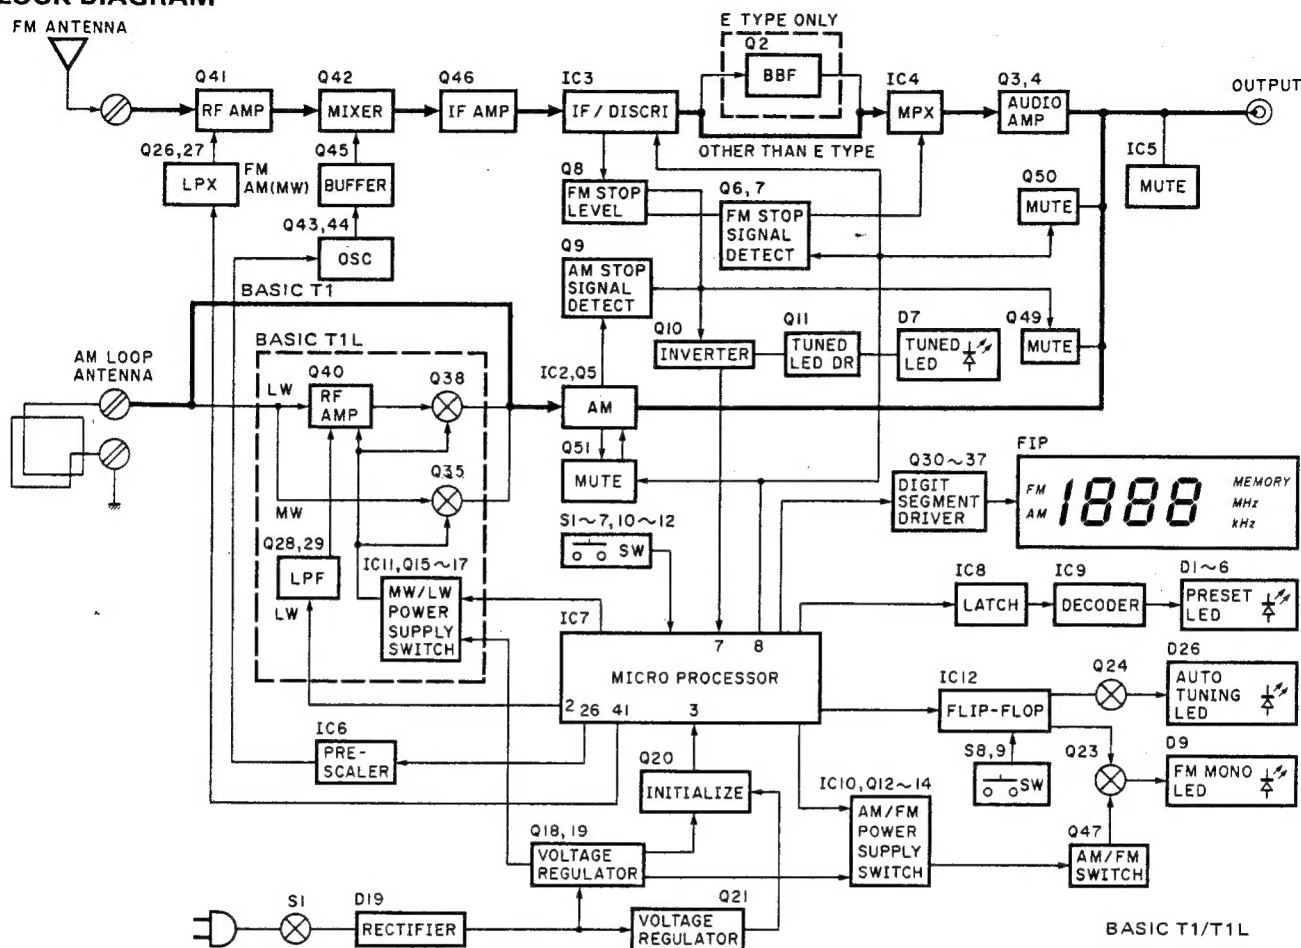

There are two kinds of pc boards used in BASIC T1 and T1L. Make sure you refer to the appropriate schematic diagram when repairing.

*Refer to parts list on page 9 for BASIC T1 (J) and T1L (J), page 18 for BASIC T1 (S) and T1L (S). Photo is BASIC T1.

BLOCK DIAGRAM/DISASSEMBLY FOR REPAIR

BLOCK DIAGRAM

DISASSEMBLY FOR REPAIR

Before repair

There is no frame to connect the front and rear panel in this BASIC T1. Instead, the pc board connects these panels, but the height of the BASIC T1 is not enough to stand the pc board upright. For these reasons, we recommend the following way of standing the pc board upright when repairing.

1. Remove the screws on the bottom plate.
2. Hook the left-hand side slit of the rear panel and lower the front panel on to the bottom plate as shown in the figure.

This will make the pc board stand stable and upright making easier to check and replace the components on the pc board.

ADJUSTMENT/REGLAGES/ABGLEICH

DISASSEMBLY FOR REPAIR

REMOVAL OF FRONT PANEL

1. Remove 3 screws retaining the front panel to the bottom plate.
2. Remove 2 screws at the bottom and 2 screws on the top of the front panel.
3. Use a standard screwdriver to push the hook which projects through the hole at the top of the front panel, to disengage.
4. Slightly tilt the front panel and lift the sub panel to disengage the bottom hook.
5. The front panel will be removed by pulling it frontward.

REMOVAL OF SUBPANEL

1. Remove the front panel.
2. Remove 2 push rivets.
3. Pull the sub panel frontward.

⚠ Indicates safety critical components. To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

DC voltages are as measured with a high impedance voltmeter during reception of the FM broadcast signal (with a signal strength of 60 dB at the ANT terminal). Values may vary slightly due to variations between individual instruments or/and units. Values in parentheses are as measured during reception of the AM broadcast signal (with a signal strength of 60 dB at the ANT terminal).
